Closing schools is one of the most powerful ways we have to slow the spread of COVID-19 and protect people at higher risk from getting very sick or dying. We encourage parents and guardians to understand the situation and do their part to protect these people, too.

**Though kids are thought to be at lower risk for severe disease from COVID-19, they can easily spread it to others.**

- The people we are most concerned about are people over age 60 and people who have chronic medical conditions like heart, lung, or kidney disease, or diabetes.

**This is not just about keeping kids safe; it’s about keeping the whole community safe by removing as many disease pathways as possible.**

When school is closed, kids and grownups should practice social distancing. Aim to stay 6 feet away from others as much as possible.

**Do not take children into any social setting when they are sick.**

- If your child is sick, keep them home and separate them from others.
  
  Call your health care provider if you are concerned about your child's illness.

- Children and teens with chronic health issues and immune-compromising conditions should check with their health care provider before participating in a shared childcare arrangement or gathering.

If you are over 60 or have a chronic medical condition, avoid gatherings and caring for other people’s children.

**Small groups and big spaces lower the risk of disease spread.**

**Recommendations for indoor gatherings and sharing childcare**

- Consider the size of the space vs. the size of the group. Aim to have the fewest number of children possible in the largest space available.

- Consider asking participating families to take their children’s temperature before gathering.

- Frequently clean high-touch surfaces like doorknobs, toys, and keyboards. **Everyday cleaning products** are effective against COVID-19.

- Practice social distancing measures. With kids, that’s hard. To increase the distance between children:
  
  - Think small — only a few friends at most.
  
  - Play games that involve fewer opportunities for touching.
  
  - When kids do touch, remind them to cover coughs and sneezes and to wash their hands frequently and thoroughly.
● Adults who join should practice social distancing and not participate if they are sick.

Recommendations for outdoor gatherings
● Try to limit groups to no more than 50 children per CDC guidance and state recommendations to limit groups to no more than 50 people.
● Limit face-to-face contact.
● Minimize activities that involve direct or close contact and avoid shared equipment as much as possible
● Repeatedly clean and disinfect any shared sporting equipment, especially objects touched with hands, like balls, bats, and playground equipment.
● Adults who join should practice social distancing and not participate if they are sick.

Recommendations for teenagers
● Aim for groups of 10 or fewer.
● Avoid spending time in larger groups and in crowded places like parties, retail spaces and movie theaters.
● Low-contact, outdoor activities, like hiking and bike riding, are great ways for small groups of teens to socialize.

Teach your children to
● Cover their mouth and nose with a tissue when coughing or sneezing, then throw the tissue in the trash and wash their hands. Teach kids to use their inner elbow if a tissue is not available.
● Wash hands often with soap and water for at least 20 seconds. Need a timer? Hum the “Happy Birthday” song from beginning to end twice. Use an alcohol-based hand sanitizer that contains at least 60% alcohol. If soap and water are not available.
● Avoid touching eyes, nose, or mouth with unwashed hands.
● Not share food, water bottles, utensils or cups.
