

# COVID-19 Vaccine for Kids

**NOW AVAILABLE FOR CHILDREN 6 MONTHS AND OLDER**

## **Vaccines are safe for children.**

The COVID-19 vaccines were evaluated prior to approval in thousands of children using the same steps every vaccine must follow to ensure it is safe and effective.

## **Vaccinating children protects them against COVID-19**

The vaccine is the best way to protect children from becoming severely ill or having long-lasting health problems due to COVID-19. Ongoing safety monitoring shows that COVID-19 vaccines continue to be safe for children.

## **A different dose of COVID-19 vaccine is given to children.**

The COVID-19 vaccine dose is based on your child's age on the day of vaccination, not on size or weight. Children get a smaller dose of COVID-19 vaccine than teens and adults that is the right amount for their age group.

## **Children may have side effects after COVID-19 vaccination.**

Side effects may affect your child's ability to do daily activities. They are usually mild and should go away within a few days. Some children have no side effects.

## **Children can safely receive other vaccines at the time they get a COVID-19 vaccine.**

Getting a COVID-19 vaccine is similar to getting other routine vaccines. Your child may get the COVID-19 vaccine and other vaccines, including a flu shot, at the same time.

## **Children who have already had COVID-19 should still get vaccinated.**

Even after a COVID-19 infection, children who then get vaccinated should get added protection against the virus.

**If you have questions, ask your child's healthcare provider.**

**Find a COVID-19 vaccine clinic.**
